Customer Journey Mapping

User persona

Healthcare Analyst / Hospital Data Manager who analyzes patient health records using Tableau dashboards to identify disease patterns and support doctors in decision-making.

User goal

To analyze healthcare datasets efficiently and generate clear visual insights about disease risk factors, patient demographics, and treatment outcomes using Tableau dashboards.

Scenario

A healthcare analyst receives hospital patient data and uses Tableau to visualize patterns such as age distribution, cholesterol levels, blood pressure trends, and heart disease risk indicators. These insights help doctors understand disease patterns and support preventive healthcare decisions.

User backstory

The analyst works in a hospital analytics department. Previously, analyzing patient records manually in spreadsheets was time-consuming and prone to errors. The organization adopted **Tableau and Tableau Prep Builder** to clean data and create interactive dashboards for better healthcare insights.

Journey map

Stage	Data Collection	Data Preparation	Data Visualization	Insight Generation	Decision Support
User action	Gather patient data from hospital databases and medical records	Clean, filter, and structure healthcare data	Create charts, graphs, and dashboards in Tableau	Analyze trends like age, cholesterol, blood pressure, and disease risk	Share dashboards with doctors and hospital management
Pain points or questions	• Data comes from multiple sources and formats	Missing values or inconsistent records	Difficulty choosing correct visualization	Identifying meaningful patterns can be complex	Ensuring data is understandable for non-technical users
Emotions	😕 Confused	😩 Frustrated	🙂 Curious	🤔 Analytical	😊 Confident
Opportunities and solutions	• Use **Tableau Prep Builder** for data cleaning and integration	Implement standardized data preparation workflow	Provide predefined healthcare dashboard templates	Use calculated fields and filters for deeper analysis	Interactive dashboards and clear visual storytelling

Emotions Across Journey

Confusion → Frustration → Curiosity → Analytical Thinking → Confidence

Opportunities

- Automated **data preparation using Tableau Prep Builder**
- Interactive **healthcare dashboards**
- Real-time **patient risk visualization**
- Better **decision support for doctors**
- Improved **data-driven healthcare management**
